

## APU negative in INFILT error

Posted by jezam - 2010/04/26 04:24

---

Hi  
I'm running an example in a europe watershed for AGWA-KINEROS. finished all the parameterization work, and running kineros. When finished the simulation the results are all zeros. The output file shows the error message of the subject. Looking for the values that could cause this error, find that Rock parameter has -19.6 value, that it couldn't be, because must be a value between 0-1 i believe. So i believe the soil parameterization failed. I'm using the FAO-Soil layer for this.  
I need some help to find wath could be the error.  
I'm using AGWA2.0 for ArcGis 9.3.1

Thanks

Jeannette
